If more than 2 infants from the same pregnancy, the mother's food package is determined by the highest breastfeeding status of one of the infants.

Currently M-SPIRIT does not load a default food package correctly for women with multiples. The following tables will help you issue the correct amounts of foods based on the amount of breastfeeding of each infant.

If the infants are older than six months of age and are either partially breastfeeding or fully formula fed, the mother would not receive a food package. Confirm that this occurs correctly. If the mother is partially breastfeeding one or both infants, she will be counted as a participant.

Table 2

Enhanced

It is possible that the system default food package appears different than the one listed below. This will occur when one of the infants is fully breastfeeding and the other is either partially breastfeeding or fully formula fed. The final food package outcome is the same.

* There is one case where this food package can't be corrected without altering the infant information. It is when one infant is fully breastfeeding and one infant is partially breastfeeding. M-SPIRIT will not allow the issuance of the correct food package. In order to issue this food package correctly, the partially breastfeeding infant must be changed to fully formula fed. Document in the participant notes why the information about breastfeeding is incorrect.
